The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply						
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).						
Status						
1)⊠ Responsive to communication(s) filed on <u>12/10/04</u> .						
	action is non-final.					
Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under <i>Ex parte Quayle</i> , 1935 C.D. 11, 453 O.G. 213.						
Disposition of Claims						
 4) Claim(s) 1-8, 10-13, 26 and 27 is/are pending in the application. 4a) Of the above claim(s) is/are withdrawn from consideration. 5) Claim(s) is/are allowed. 6) Claim(s) 1-8, 10-13, 26 and 27 is/are rejected. 7) Claim(s) is/are objected to. 8) Claim(s) are subject to restriction and/or election requirement. 						
Application Papers	·					
9) The specification is objected to by the Examiner. 10) The drawing(s) filed on is/are: a) accepted or b) objected to by the Examiner. Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a). Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d). 11) The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.						
Priority under 35 U.S.C. § 119 12) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f). a) All b) Some col None of: 1. Certified copies of the priority documents have been received. 2. Certified copies of the priority documents have been received in Application No 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-6, 12 and 13 rejected under 35 U.S.C. 102(b) as being anticipated by Pestes et al U.S. Pat. No. 5,623,942.

Pestes discloses a flexible probe (12) having a diameter sized to access a breast duct (12) and a distal portion being capable of contacting an interior lumen of a breast duct and retrieving a sample of the breast duct fluid from within the duct for analysis (distal end of 10), and wherein said probe is free of an opening through which a fluid form an external source can be introduced into said probe and pass through said probe into the duct when said probe is positioned within the breast duct (fig. 1), and wherein said probe is rigid before entry into the breast duct, and flexible upon resistance into the duct (col. 2, lines 16-25 and 32-40); as to claims 2-6, (distal end of 10). As to claim 13, (nylon).

Note: Hung et al U.S. Pat. No. 6,391,026 is being used as evidence to support the examiner position that Pestes discloses a flexible probe having a diameter sized to access a breast duct and a distal portion capable of contacting an interior lumen of a breast duct. Hung discloses a catheter suitable for accessing ductal lumens with a distal tip having a outer diameter of about 0.8 mm or 0.08 cm. Pestes discloses the same diameter of 0.08 cm (emphasis added).

Application/Control Number: 09/912,499

Art Unit: 3763

Therefore, it is quite clear that the device of Pestes is capable of performing the function as set forth in claim 1.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 7-8, 10, 26 and 27 are rejected under 35 U.S.C. 103(a) as being unpatentable over Pestes U.S. Pat. No. 5,623,942 in view of Nicholson et al U.S. Pat. No. 4,616,656.

Pestes discloses a device for collecting breast duct fluid substantially as claimed except for a means (marker/indicia) to measure a quality of the ductal fluid in situ. Nicholson et al discloses a means (marker/indicia) to measure a quality of the ductal fluid in situ (col. 4. lines 12-17). Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the distal portion of Pestes with the means to measure a quality of the ductal fluid as taught by Nicholson for providing markings to indicate the depth of the device distal end when anchored. Note: applicant indicates that his quality/means can comprise a marker (page 4, line (8).

Pestes discloses a device for collecting breast duct fluid substantially as claimed except for a probe diameter between 0.008 cm to about 0.045 cm. Pestes discloses a probe with a diameter 0.08 cm.

on/Control Number: 09/912,49

It would have been an obvious matter of design choice to one having ordinary skill in the art at the time the invention was made to have various diameter of the probe, since it has been held that such a modification would have involved a mere change in the size of a component. A change in size is generally recognized as being within the level of ordinary skill in the art. Furthermore, applicant has not disclosed that the various diameters solves any stated problem in the art or is for any particular purpose and it appears that the invention of Pestes would perform equally well.

Claim 11 is rejected under 35 U.S.C. 103(a) as being unpatentable over Pestes U.S. Pat. No. 5,623,942 in view of Marchosky et al U.S. Pat. No. 4,947,842.

Pestes discloses the device substantially as claimed except for a coating of an anesthetic on the exterior of the probe. Marchosky discloses an anesthetic coating on the exterior of the probe. Therefore, it would have been obvious to one of ordinary skill in the art at the time the invention was made to modify the device of Pestes with the coating as taught by Marchosky to relieve pain in the treatment of tumors particularly in the area of the breast (col. 5).

Response to Arguments

Applicant's arguments filed 6/30/04 have been fully considered but they are not persuasive.

Response to Amendment

Drawings

Applicant has canceled the claim 9, therefore, the objection has been withdrawn.

Art Unit: 3763

Response to Arguments

The indicated allowability of claims 1 and 12 are withdrawn in view of a change of

interpretation of the claims.

Applicant's arguments filed 12/10/04 have been fully considered but they are not

persuasive.

As to claims 1 and 12, it is the examiner position that the probe of Pestes is rigid before

entry into the breast duct because it will not unnecessarily bend before entry into the breast and

yet it is ductile upon resistance to the duct. In conclusion, the device of Pestes is rigid and

flexible depending on the environment.

Conclusion

Any inquiry concerning this communication or earlier communications from the

examiner should be directed to Kevin C. Sirmons whose telephone number is 571-272-4965.

The examiner can normally be reached on Monday-Friday 6:30-4:00 ALT FRI.

Information regarding the status of an application may be obtained from the Patent

Application Information Retrieval (PAIR) system. Status information for published applications

may be obtained from either Private PAIR or Public PAIR. Status information for unpublished

applications is available through Private PAIR only. For more information about the PAIR

system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR

system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
